

# **BRIEFTAUBEN Tonikum**

## **Produktion & Vertrieb**

**Since 1995 Carrier Pigeon Tonic Distribution**

### **Instructions**

**For moulting, breeding and especially travelling.**

**The sensation of the carrier pigeon sport.**

**Being successful with minimum effort.**

**Characteristics according to statements of satisfied breeders:**

- Pigeons have more stamina during flights.
- Pigeons have a better metabolism.
- Pigeons have shining eyes and plumage.
- Helps against pigeon diarrhoea.
- Moulting is stimulated.
- The mating drive is stimulated.
- Young pigeons luxuriate.
- There are almost no unfertilized eggs.
- Pigeons tend to fly more.
- Almost no losses during trouble-free competition flights.

### **Instructions.**

Give your carrier pigeons 10-14 days **before departure and after return** 15-25 drops in one litre of water during every water change. **(increase the amount with growing distance).**

**Female animals which do not take part in the flight regularly** receive 5 drops on one litre of water during every water change.

Give them also 5 drops in one litre of water during every water change after the travelling season and during **moulting** given that male and female animals are separated.

**Even after moulting** you should regularly give your pigeons a water-tonic mix with 3 drops in one litre of water during mating and possible winter breedings until 10-14 days **before competition flights.**

**Young pigeons shall** receive 3 drops in one litre of water.

**Young pigeons** which participate in **competition flights** shall receive 5-15 drops in one litre of water 10 - 14 days before and during the flights **(increase the amount with growing distance).**

**Shake before use! Store at room temperature!**  
**Made of German and mainly foreign herbs without chemical additives.**

**You can start using the carrier pigeon tonic at any time. If possible, do not interrupt the use during travel time.**

Price 34.80 Euro per 150 ml bottle.
